INTRODUCTION

The International Nut and Dried Fruit Council Foundation (INC), founded in 1983, is the leading international source for information on nuts and dried fruits for health, nutrition, statistics, food safety, and quality standards. The INC's mission is to facilitate sustainable growth in supply and consumption through sharing the goodness and health benefits of nuts and dried fruit globally.

This statistical yearbook provides an overview of the latest statistics on nut and dried fruit production, trade, and consumption globally. Statistical data have been gathered from different information sources, countries, and formats.

Statistics are classified by product, which in turn are classified as follows:

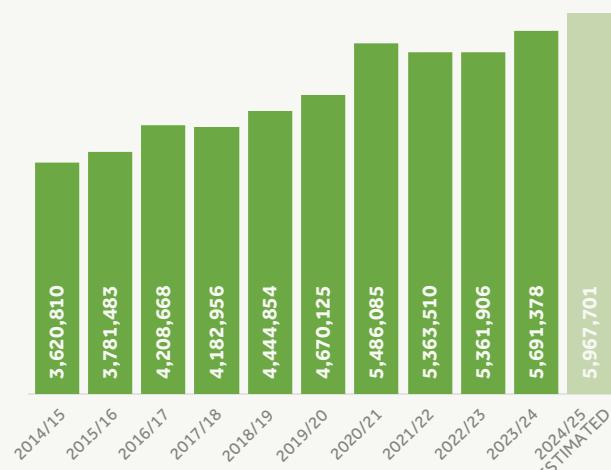

- Production: total metric tons produced from 2014/15 to 2024/25, top producing countries and five-year average share (carry-in and carry-out stocks are not included).
- Exports: total metric tons exported or re-exported from transit countries from 2014 to 2023 (January-December), top exporting countries and five-year average share.
- Imports: total metric tons imported by the twenty largest importers between 2014 and 2023.
 - Some countries are identified as transit points or processors. For example, the Netherlands and Germany are major re-exporters to the rest of Europe and Viet Nam and India are important processing countries of raw cashew nuts.
- Consumption: estimated for the 20 leading consuming countries from 2019 to 2023 as the apparent availability annually, which may generate discrepancies with the actual consumption per capita. Consumption data is presented as follows:
 - Estimated total metric tons consumed between 2019 and 2023.
 - Consumption per capita in kilograms per year: total volume consumed throughout the total population of the country.
 - Estimated consumption per capita in kilograms per year: total volume consumed by the estimated percentage of population considered to be regular consumers of the specified nut or dried fruit.

Data sources: INC Database, DESA/UNSD United Nations Comtrade Database, European Commission Eurostat (Comext), U.S. Department of Agriculture Global Agricultural Trade System (GATS), Chinese Customs, Turkish Statistical Institute Foreign Trade Statistics, World Bank, and the United Nations Department of Economic and Social Affairs, Population Division (2023).

WORLD PRODUCTION

WORLD TREE NUT PRODUCTION (Metric Tons)

Kernel basis, except pistachios in-shell

World tree nut production shows a steady upward trend from 2014/15 to the estimated 2024/25 season. Production has nearly doubled over this timeframe, increasing from approximately 3.62 million metric tons in 2014/15 to 5.69 M MT in 2023/24 and an estimated 5.97 M MT for 2024/25 (all tree nuts reported on a kernel basis, except pistachios, which are expressed on an in-shell basis).

Year-on-year increases are evident, with no significant declines, indicating stable growth in the industry, potentially reflecting factors such as increased global demand over the past decade, expanded production areas, and improved yields. While growth continues, the rate of increase appears to have moderated in recent years, suggesting the possibility of reaching a more stabilized growth phase.

WORLD PEANUT PRODUCTION (Metric Tons)

In-shell basis

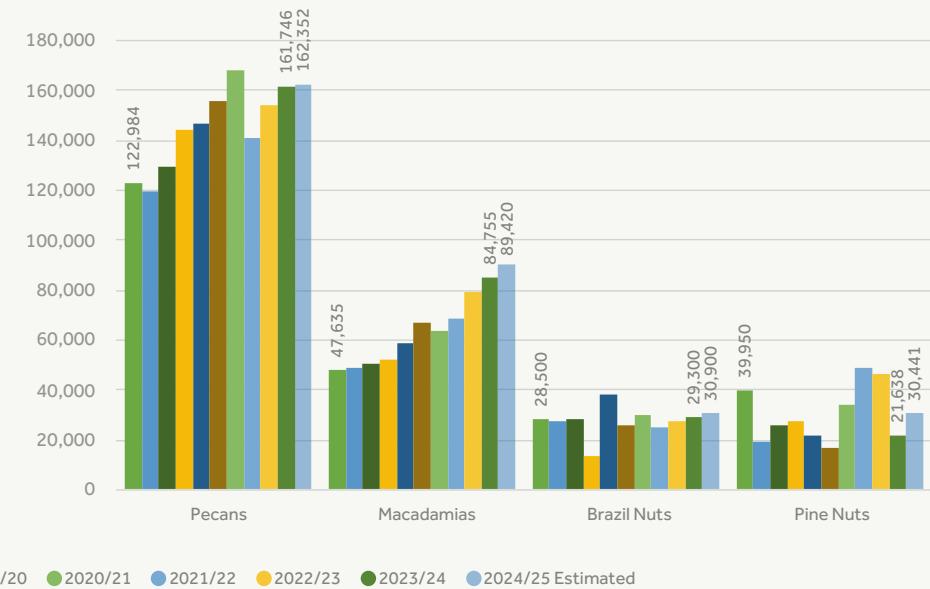

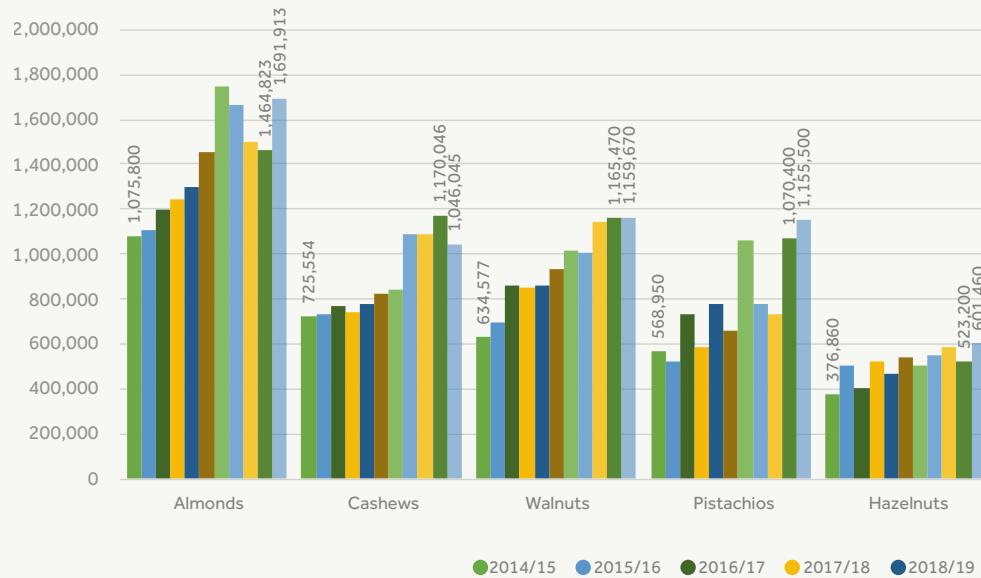

World peanut production (in-shell basis) from 2014/15 to the estimated 2024/25 season shows moderate growth, with fluctuations in production levels throughout the period.

Between 2014/15 and 2020/21, there is a consistent upward trajectory, with production growing from approximately 38.89 M MT to 50.78 M MT, marking a notable peak in 2020/21. Thereafter, production levels decrease slightly down to 47.73 M MT in 2023/24. At the time of this report, the 2024/25 estimate indicated a recovery, with production expected to reach a new high of nearly 52.48 M MT, slightly surpassing the 2020/21 peak.

These fluctuations may reflect factors such as weather variability or shifts in harvested areas, but the overall trend underscores a resilient and steadily growing peanut production industry globally.

WORLD PRODUCTION

WORLD TREE NUT PRODUCTION (Metric Tons)
Kernel basis, except pistachios in-shell

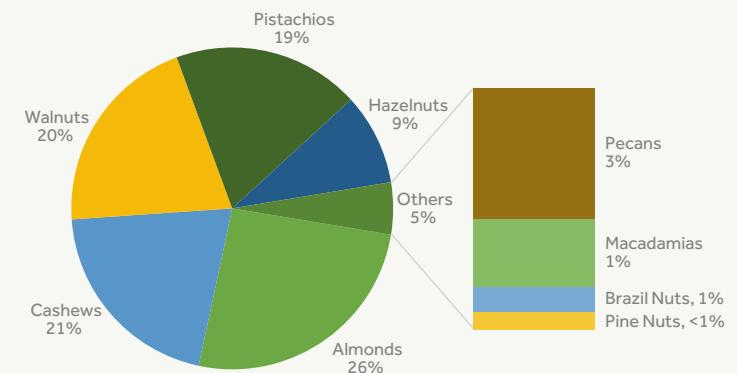

Between 2014/15 and 2023/24, walnuts, pistachios, and macadamias led in terms of average growth, each with a compound annual rate of 7%. Cashews grew at a 5% rate, followed by hazelnuts (4%), almonds (3%), and pecans (3%). Forest-sourced Brazil nuts and pine nuts exhibited typical interannual fluctuations in total crop.

Overall, the total production for most nuts showed an upward trend over the last decade, with increasing contributions from all major tree nut types.

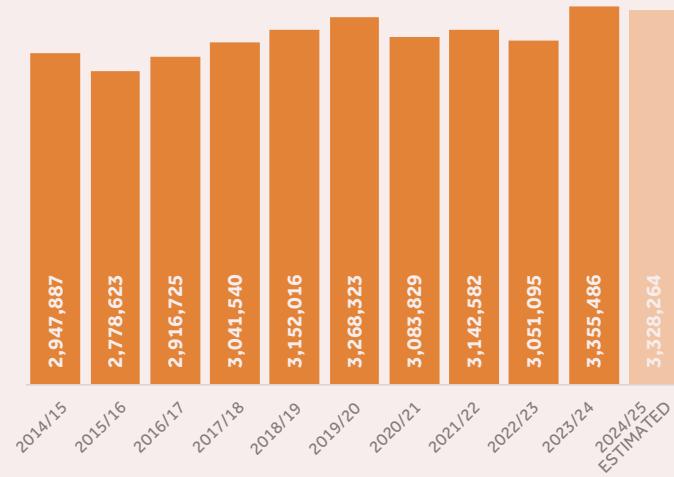

In season 2023/24, almonds accounted for the largest share of tree nut production, representing 26% of the total. Cashews were the second-largest contributor, with 21%. Walnuts and pistachios closely followed, contributing 20% and 19%, respectively. Hazelnuts made up 9% of the share. Pecans, macadamias, Brazil nuts, and pine nuts accounted for the remaining 5% of the world crop.

2023/24 WORLD TREE NUT PRODUCTION (Metric Tons)
Kernel basis, except pistachios in-shell

WORLD PRODUCTION

WORLD DRIED FRUIT PRODUCTION (Metric Tons)

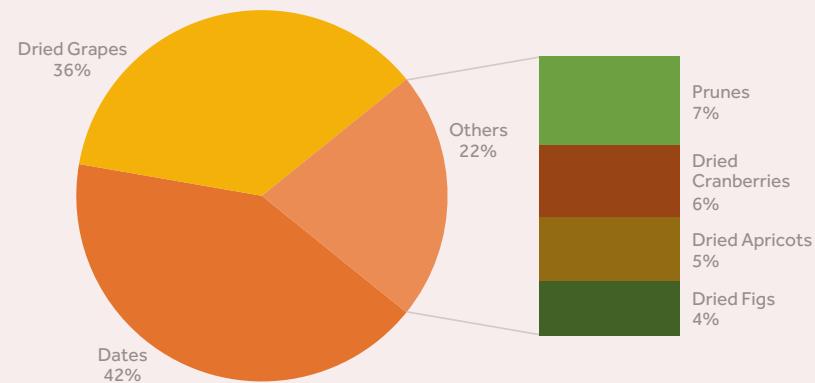

Over the ten-year period from 2014/15 to 2023/24, world dried fruit production consistently hovered around 3 million metric tons, with only minor deviations. Initial production in 2014/15 was around 2.95 M MT, gradually increasing to 3.36 M MT in 2023/24 and an estimated 3.33 M MT for 2024/25.

Date production steadily increased from 961,000 MT in 2014/15 to 1.41 M MT in 2023/24. Consistently the largest contributor across the last decade, production of dried grapes (Raisins, Sultanas, and Currants) remained stable at around 1.2–1.4 M MT. Dates, dried cranberries, and dried

apricots presented the highest average growth, with 4% annual rates between 2014/15 and 2023/24. Prunes and dried figs exhibited fairly stable production trends.

In season 2023/24, dates and dried grapes dominated production, with a combined 78% share. Dates led global dried fruit production with 42%. Dried grapes were the second-largest category, making up over a third of total production. The remaining 22% was composed of prunes (7%), dried cranberries (6%), dried apricots (5%), and dried figs (4%), collectively accounting for 22% of total production.

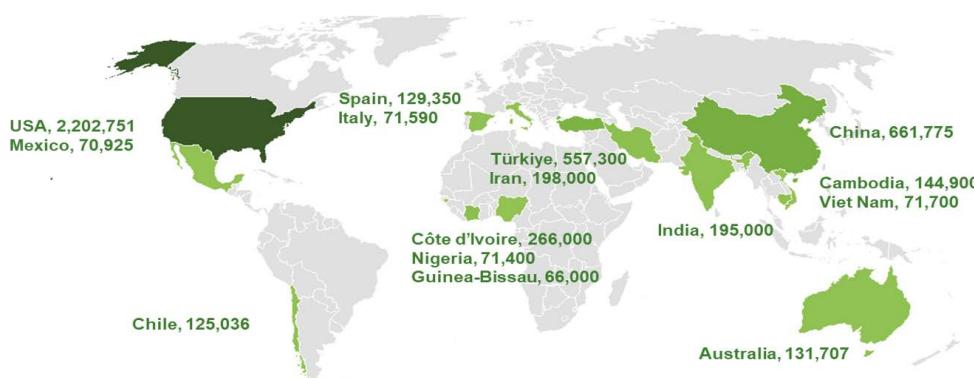

2023/24 WORLD DRIED FRUIT PRODUCTION (Metric Tons)

WORLD PRODUCTION

TOP TREE NUT PRODUCING COUNTRIES (2023/24, Metric Tons)

Kernel basis, except pistachios in-shell

TOP PEANUT PRODUCING COUNTRIES (2023/24, 1000 Metric Tons)

In-shell basis

TOP DRIED FRUIT PRODUCING COUNTRIES (2023/24, Metric Tons)

The USA led global tree nut production in 2023/24, accounting for 39% of the world share, with almonds, pistachios, and walnuts being the most widely grown crops. China ranked second with 12% of the global share, dominated by walnuts. Türkiye followed closely, contributing 10% to global production, with hazelnuts and pistachios comprising most of the country's tree nut output.

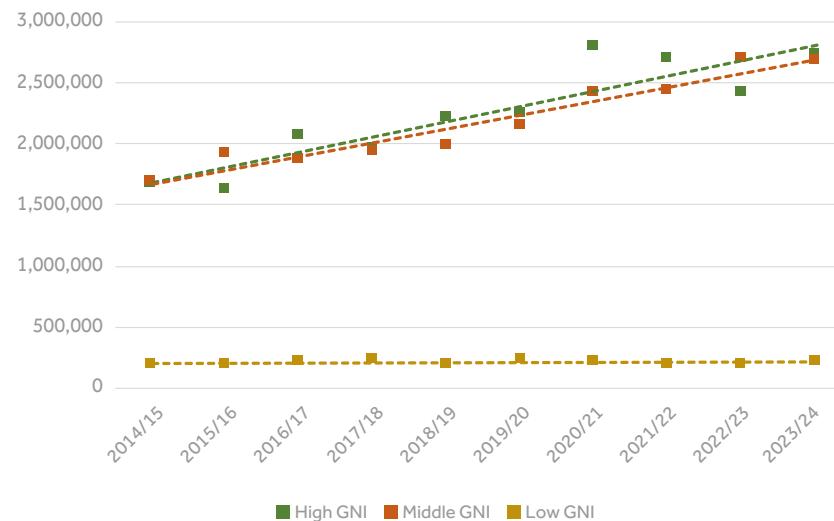

China and India led global peanut production, contributing 38% and 13% to the total crop, respectively, in

2023/24. Nigeria followed in third place with 9%, while the USA accounted for 6%. Senegal produced 4% and Argentina the following 2%.

The USA led global dried fruit production in 2023/24, accounting for 12% of the total, with dried grapes, cranberries, and prunes making up most of its output. Türkiye followed closely with 11%, driven by dried grapes, dried apricots, and dried figs. Saudi Arabia and Iran each contributed 10% to global production.

PRODUCTION TRENDS

WORLD TREE NUT PRODUCTION (Metric Tons)
Kernel basis, except pistachios in-shell

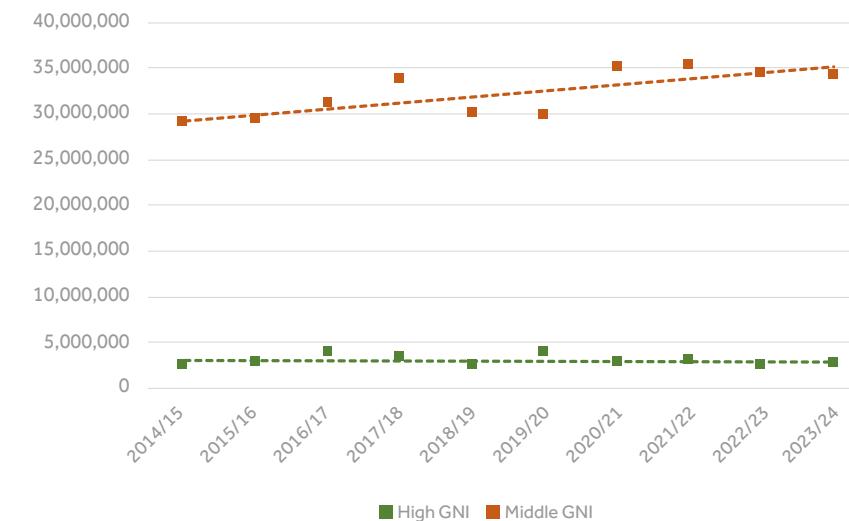

Producing countries were categorized based on their per capita gross national income (GNI) using the World Bank Atlas method (current US\$, 2023). Low-income economies have a GNI per capita of US\$1,145 or less, middle-income economies (including lower-middle-income and upper-middle-income groups) have a GNI per capita between US\$1,146 and US\$14,005, and high-income economies have a GNI per capita exceeding US\$14,005.

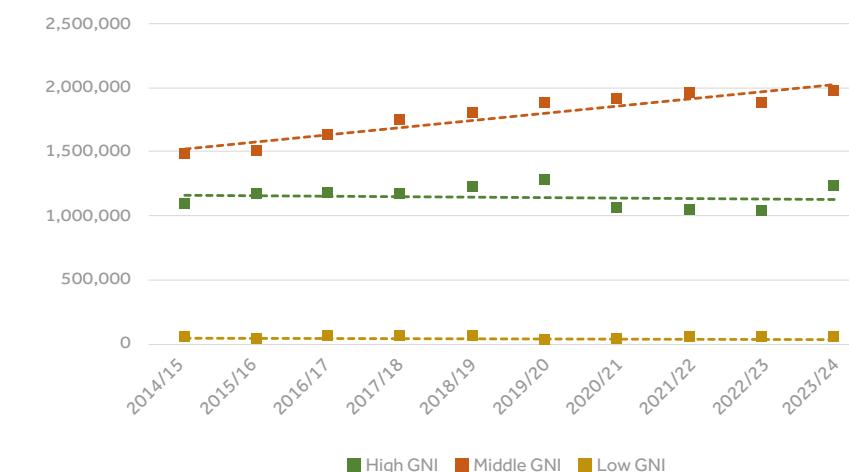

Over the last decade, high-GNI countries dominated tree nut production with

the fastest growth (compound annual growth rate 6%), while middle-GNI producers grew at a slightly slower pace (CAGR 5%). Middle-GNI countries led peanut production (CAGR 2%), with high-GNI economies contributing far less and showing little change. For dried fruits, middle-GNI countries were the primary producers (CAGR 3%), while high-GNI producers remained stagnant. Low-GNI economies contributed minimally or were largely unrepresented across all categories.

WORLD PEANUT PRODUCTION (Metric Tons)
In-shell basis

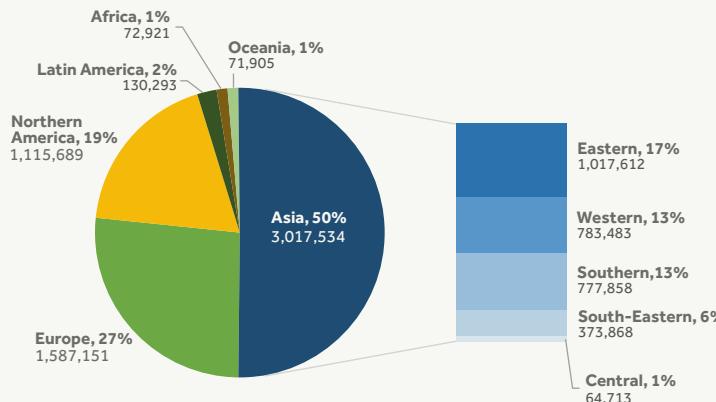

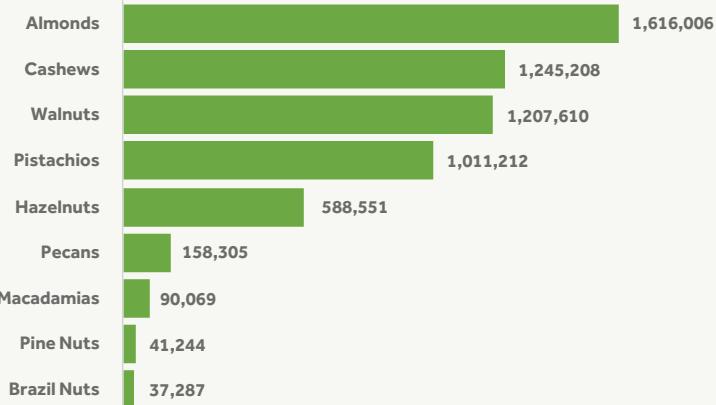

WORLD DRIED FRUIT PRODUCTION (Metric Tons)

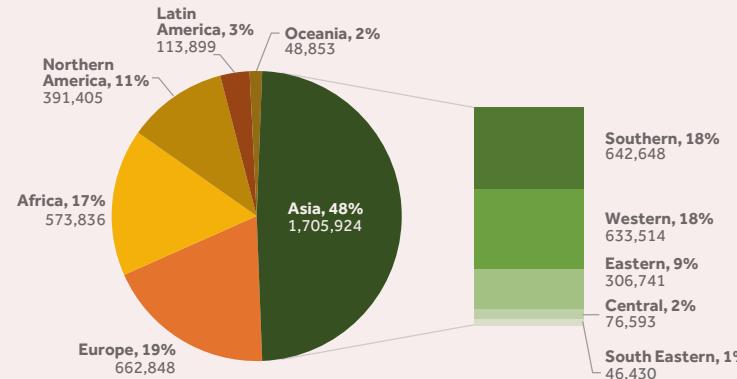

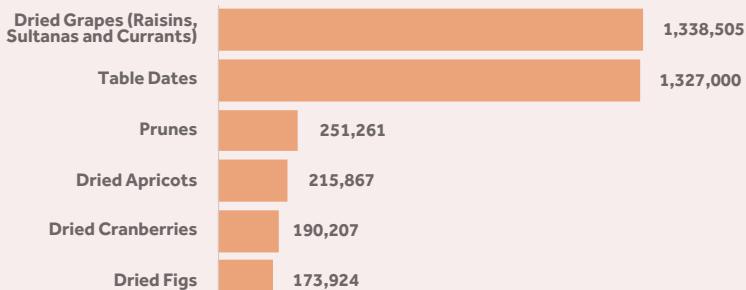

WORLD CONSUMPTION

2023 WORLD TREE NUT ESTIMATED CONSUMPTION (Metric Tons)

Kernel equivalent, except pistachios in in-shell equivalent

2023 WORLD DRIED FRUIT ESTIMATED CONSUMPTION (Metric Tons)

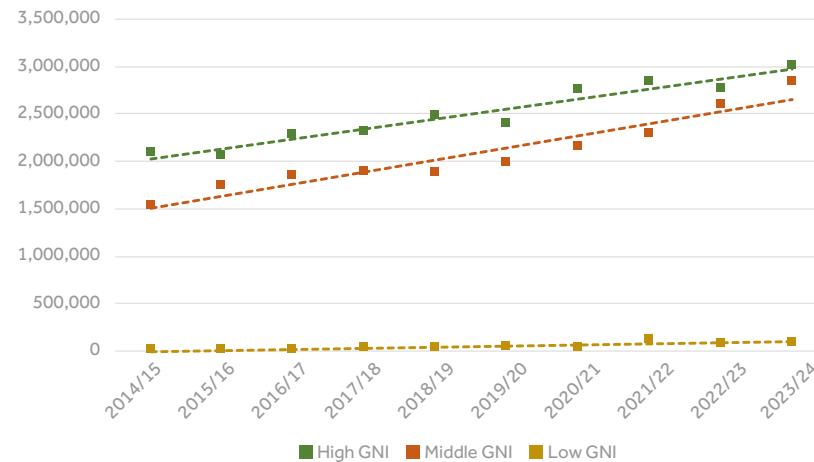

Almonds were the most widely consumed tree nut in 2023, representing 27% of global consumption. Cashews and walnuts followed closely, contributing 21% and 20%, respectively. Pistachios accounted for 17%, while hazelnuts made up 10% of the total. Together, pecans, macadamias, pine nuts, and Brazil nuts accounted for the remaining 5%. Asia was the leading region for tree consumption, accounting for 50% of the global total, with Eastern, Western, and Southern Asia as the primary contributors. Europe ranked second, representing 27% of global consumption, while North America followed with a 19% share.

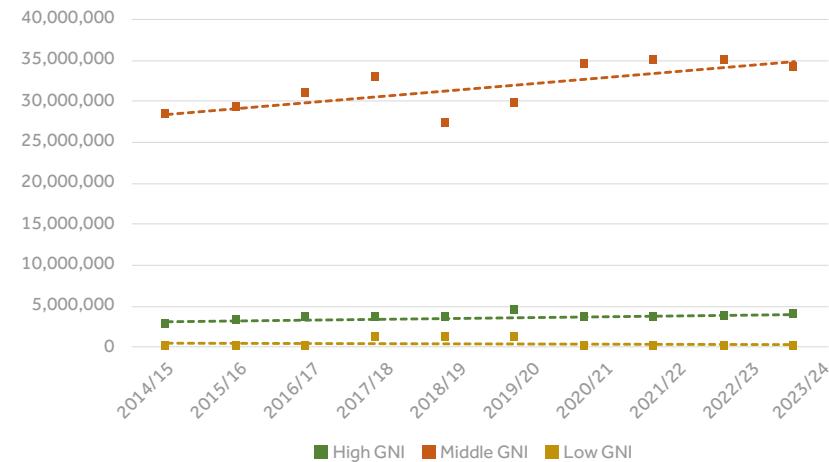

In 2023, dried grapes (38%) and dates (38%) dominated global dried fruit consumption, followed by prunes (7%), dried apricots (6%), cranberries (5%), and figs (5%). Asia led with 48%, driven by Southern and Western Asia (18% each), while Europe and Northern Africa were also key consumers.

CONSUMPTION TRENDS

WORLD TREE NUT ESTIMATED CONSUMPTION (Metric Tons)
Kernel basis, except pistachios in-shell

WORLD PEANUT ESTIMATED CONSUMPTION (Metric Tons)
In-shell basis

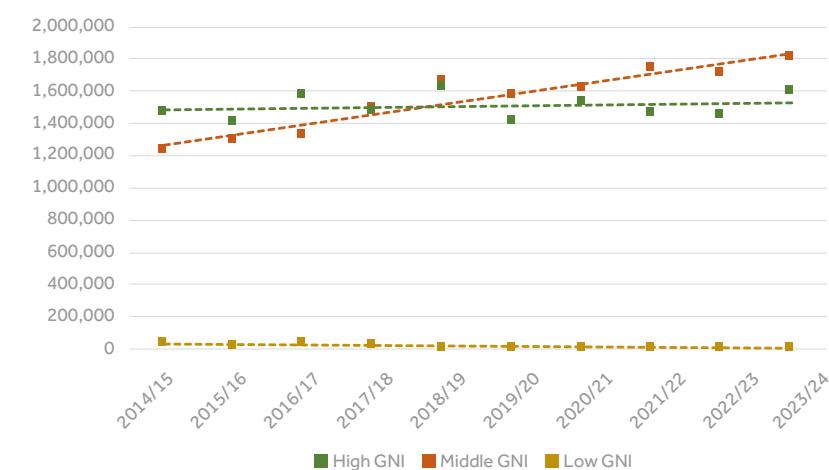

Since 2014/15, high-income economies recorded the highest consumption levels, with steady growth at a compound annual growth rate (CAGR) of 4%. Middle-income countries also demonstrated significant consumption, growing robustly at a CAGR of 7%. Middle-income countries accounted for most of the global peanut consumption and grew at an average rate of 2%.

Middle-GNI countries emerged as the primary drivers of dried fruit consumption growth, achieving a CAGR

of 4% and leading overall consumption in the last few seasons. In contrast, high-GNI countries sustained a steady, yet significant, consumption (CAGR 1%).

This data highlights a clear correlation between income levels and consumption patterns, with higher- and middle-income countries favoring tree nuts and dried fruits, while middle-income regions drive peanut consumption.

WORLD DRIED FRUIT ESTIMATED CONSUMPTION (Metric Tons)

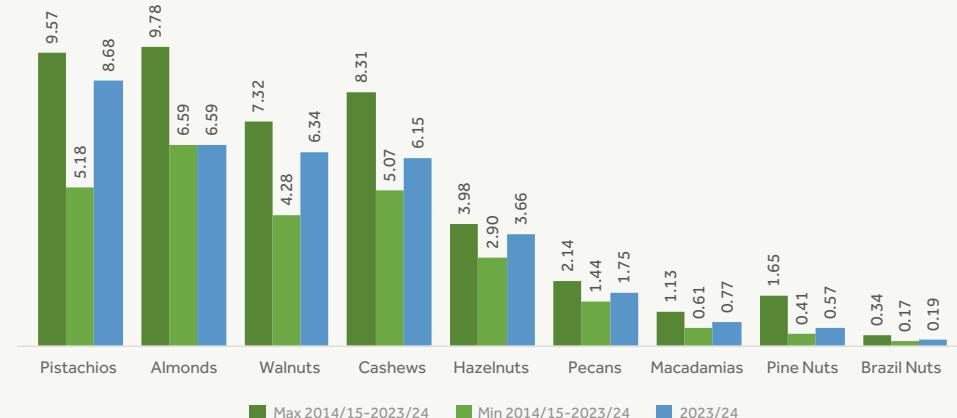

SUPPLY VALUE

TREE NUT AND DRIED FRUIT SUPPLY VALUE (Billion \$)

TREE NUT SUPPLY VALUE (Billion \$)

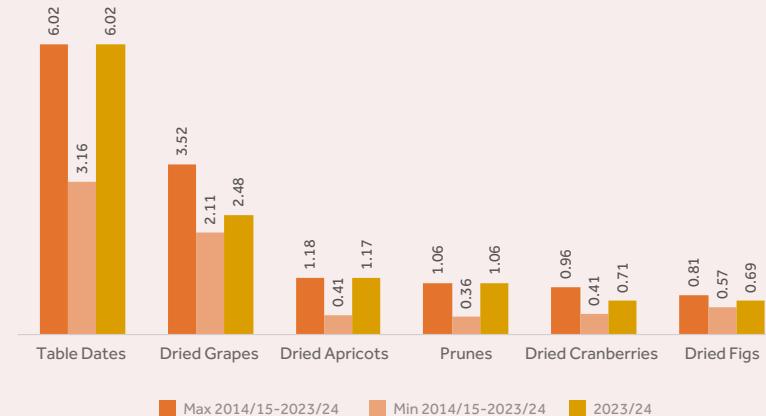

The supply value of tree nuts and dried fruits is obtained by multiplying production by the monthly unitary price averaged annually (customs paid upon arrival in Europe).

Despite some year-to-year fluctuations, the combined supply value of tree nuts and dried fruits exhibited a slight upward trend from 2014/15 to 2023/24. The supply value peaked at US\$49.99 billion in 2020/21 before slightly declining to US\$46.84 billion by 2023/24. Over the last decade, the combined compound annual growth rate (CAGR) was 1%, with tree nuts growing at 1% and dried fruits at 3%.

In season 2023/24, pistachios, almonds, walnuts, and cashews dominated in value. With the exception of pistachios, which were closer to their maximum, overall values remained below peak levels. Table dates led in dried fruit value, maintaining their maximum level in 2023/24, while dried grapes were below their peak, yet above the lowest point. Dried apricots and prunes were also near or equal to their peak, while dried cranberries and dried figs were below.

DRIED FRUIT SUPPLY VALUE (Billion \$)

ALMONDS

PRODUCTION

ALMONDS

Over the past decade, global almond production has demonstrated a steady upward trajectory, peaking at 1.75 million metric tons in 2020/21. While there has been a slight dip since that record year, production levels remain strong, with 1.46 M MT in 2023/24 and 1.69 M MT estimated for 2024/25.

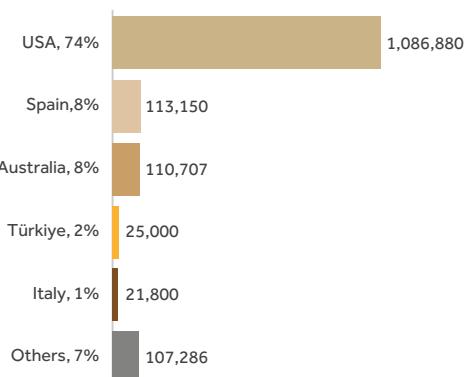

The USA dominates global almond production, consistently producing

over 70% of the world's supply, with 1.09 M MT in 2023/24. Over the five-year average (2019/20-2023/24), the USA has accounted for 79% of global production. Spain and Australia made up 16% of global production in season 2023/24, maintaining their positions as the next largest producers.

5-year Average (2019/20-2023/24, Metric Tons, kernel basis)

WORLD ALMOND EXPORTS
(Metric Tons, January–December)

EXPORTS

Over the last decade, global almond exports have increased steadily, with total exports reaching 1.44 million metric tons in 2023 (kernel equivalent). Both shelled and in-shell almonds contributed significantly to this trend. Nonetheless, the dominance of shelled almonds remains evident.

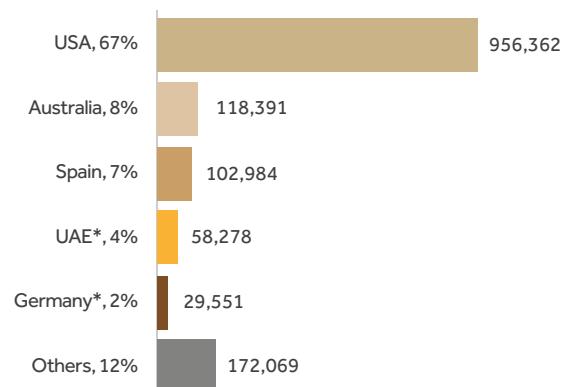

The USA leads almond exports, with 67% of global exports in 2023, equating to 956,362 MT. Other notable exporters include Australia and Spain, with Australia

exporting 118,391 MT in 2023 and Spain closely following at 102,984 MT.

Europe dominated the shelled almond export market in 2023, accounting for 565,743 MT (49% of the total), led by Spain and Germany. Asia followed with 434,836 MT (38%), driven by imports from Türkiye, the UAE, China, and Japan. In the in-shell almond market, India and China were key players, making up 56% and 15% of total shipments, respectively.

Consumption per capita: Calculated using population data provided by the United Nations, Department of Economic and Social Affairs, Population Division.

Estimated consumption per capita: Derived based on the percentage of the population estimated to consume the specified product.

The per capita consumption and estimated per capita consumption for the World Total represent the average across all consuming countries.

BRAZIL NUTS

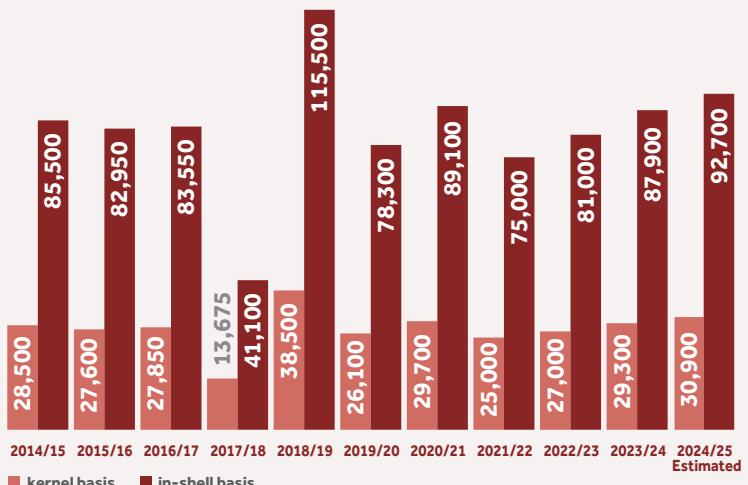

PRODUCTION

Brazil nuts are harvested from the Amazon rainforest, making their production subject to inter-annual variation as influenced by seasonal conditions, as well as economic and sociopolitical factors. Global production has, therefore, shown fluctuations over the years, reaching 87,900 metric tons on an in-shell basis (29,300 MT kernel basis) in 2023/24, with an estimated crop of 92,700 MT (30,900 MT kernel basis) for 2024/25.

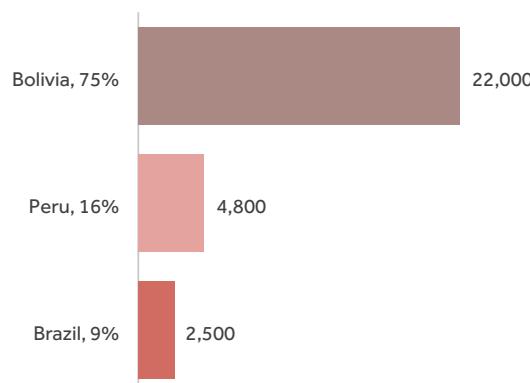

Bolivia is the world leader in Brazil nut production, with a 75% share in 2023/24, producing 22,000 MT on a kernel basis. Over the five-year average (2019/20–2023/24), Bolivia has maintained a similar dominance, contributing 75% of global production annually. Peru and Brazil follow as the second and third-largest producers, accounting for 16% and 9%, respectively, in 2023/24. Peru's production stands at 4,800 MT, while Brazil contributes 2,500 MT.

BRAZIL NUTS

EXPORTS

WORLD BRAZIL NUT EXPORTS
(Metric Tons, January-December)

Over the past decade, Brazil nut export volumes have remained fairly stable, with a peak of 50,182 metric tons in 2018 and 48,325 MT (kernel equivalent) exported in 2023 and a clear predominance of shelled Brazil nuts in exports.

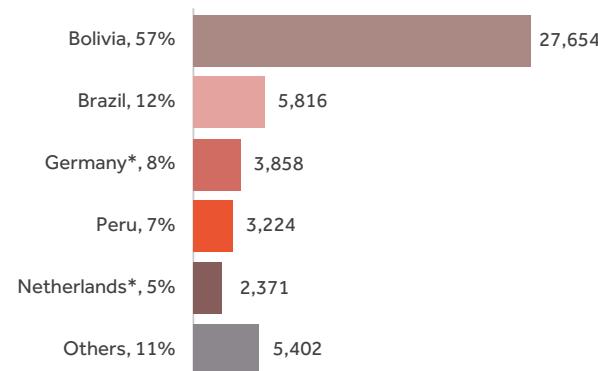

12% of exports in 2023, while Peru accounted for 7% of the global trade.

Bolivia is the leading exporter, commanding 57% of the global Brazil nut export market in 2023 and maintaining a five-year average of 57%. Brazil follows as the second-largest exporter, contributing

Europe led the shelled export market in 2023 with 28,845 MT (63% of the total), driven by the Netherlands and Germany. The USA followed with 7,175 MT (16%). For in-shell shipments, Peru and Bolivia, as key processing hubs, were the top destinations, receiving 43% and 13% of the total, respectively.

Estimated consumption per capita: Derived based on the percentage of the population estimated to consume the specified product.

The per capita consumption and estimated per capita consumption for the World Total represent the average across all consuming countries.

CASHews

CASHews PRODUCTION

Global cashew production has shown steady growth over the past decade, going from 3.29 million metric tons of raw cashew nuts in 2014/15 to 5.39 M MT in 2023/25 (725,554 MT and 1,170,046 MT kernel basis, respectively), with a total crop of 4.81 M MT estimated for 2024/25.

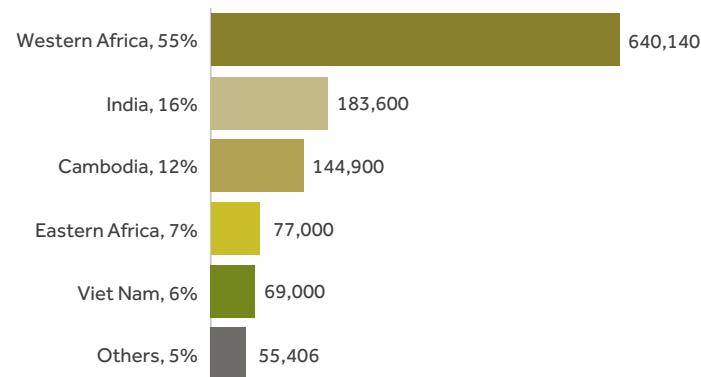

Western Africa contributed 55% of the total production in 2023/24 with

640,140 MT (kernel basis). Over the five-year average (2019/20–2023/24), the region consistently accounted for more than half of the world's production. India follows as the second-largest producer, contributing 16% in 2023/24, with 183,600 MT. Cambodia, a rapidly emerging producer, accounted for 12%, while Eastern Africa and Viet Nam also play important roles, producing 7% and 6%, respectively.

EXPORTS

Global cashew exports reveal a steady growth trend, with 2023 maintaining near-record levels at 1.49 million metric tons (kernel equivalent).

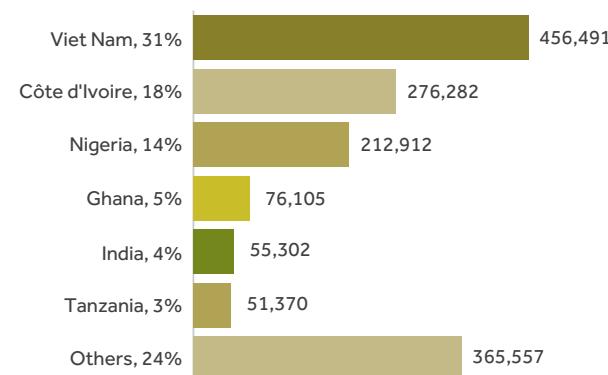

Viet Nam leads global cashew exports, averaging 33% over five years and contributing 31% in 2023, followed by Côte d'Ivoire (18%) and Nigeria (14%). African countries and Cambodia are key in-shell exporters, primarily supplying Viet Nam and India for processing, while Viet

Nam and India dominate shelled exports. Nonetheless, processing capacity in Africa keeps growing year on year.

In 2023, Viet Nam and India together accounted for 92% of the total import share of cashews (49% and 43%, respectively). As for the shelled market, imports into Europe amounted to 288,155 MT, representing 33% of the total, followed by the USA with 144,241 (17%).

Consumption per capita: Calculated using population data provided by the United Nations, Department of Economic and Social Affairs, Population Division.

Estimated consumption per capita: Derived based on the percentage of the population estimated to consume the specified product.

The per capita consumption and estimated per capita consumption for the World Total represent the average across all consuming countries.

HAZELNUTS

PRODUCTION

INC NUTS & DRIED FRUITS STATISTICAL YEARBOOK 2024

World hazelnut production shows consistent growth, with the total crop for 2023/24 reaching 1.12 million metric tons on an in-shell basis (523,200 MT kernel basis), and a 2024/25 production estimated at 1.29 M MT.

Türkiye continues to dominate as the leading producer, averaging 69% over the past five years and contributing 62% of global output in 2023/24. Italy (8%), the

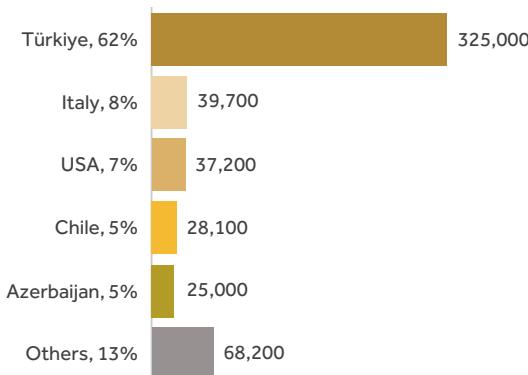

USA (7%), Chile (5%), and Azerbaijan (5%) followed as key contributors. Over the five-year average (2019/20–2023/24), Italy has maintained its position as the second-largest producer, contributing 8%, reflecting its long-standing tradition of hazelnut cultivation. The USA follows with 5% (28,050 MT), driven largely by production in Oregon. Chile contributed 4% of the total, indicating its growing role in the market.

EXPORTS

Over the last decade, world hazelnut exports have grown from 344,141 metric tons in 2014 (kernel equivalent) to 462,391 MT in 2023.

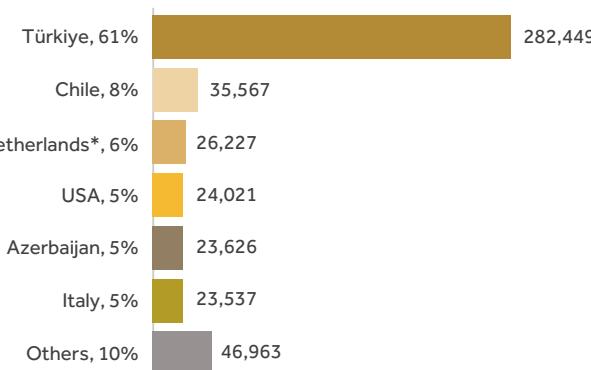

Türkiye dominates the export market, averaging 69% over the past five years and accounting for 61% of total global exports in 2023. Other notable exporters include Chile (8%), the USA (5%), and Azerbaijan (5%).

Europe remains the primary destination for hazelnut exports, receiving 82% of in-shell shipments and 58% of shelled shipments in 2023. Germany led the way in shelled hazelnut imports, while Italy, a major processing hub, dominated in-shell imports.

Consumption per capita: Calculated using population data provided by the United Nations, Department of Economic and Social Affairs, Population Division.

Estimated consumption per capita: Derived based on the percentage of the population estimated to consume the specified product.

The per capita consumption and estimated per capita consumption for the World Total represent the average across all consuming countries.

MACADAMIAS

PRODUCTION

Global macadamia production has experienced steady growth over the past decade, with estimated production reaching 328,023 metric tons in 2024 on an in-shell basis (89,420 MT kernel basis), up from 176,335 MT in 2014.

South Africa leads global production, averaging 29% over the past five years and accounting for 32% (28,800 MT, kernel basis) of the total in 2024.

China follows with 19% (17,400 MT), Australia also contributes 19% (17,300 MT), highlighting its long-standing presence in the industry. Kenya also plays a significant role, producing 10% (8,800 MT). Other producers collectively account for 19 % of global output.

WORLD MACADAMIA EXPORTS

(Metric Tons, January–December)

EXPORTS

World macadamia exports have grown steadily over the past decade, reaching a record high of 76,664 metric tons in 2023 (kernel equivalent), up by 55% from 2014. A notable trend is the increasing share of in-shell exports, which accounted for 42% of the total in 2023, compared to 31% in 2014.

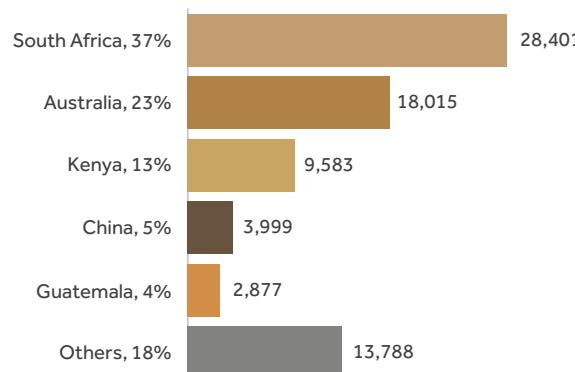

Maintaining an average of 34% over the past five years and accounting for 37% (28,401 MT) in 2023 South Africa

leads global exports. Australia follows as the second-largest exporter, averaging 24% over the 2019-2023 period and contributing 23% (18,015 MT) in 2023. Kenya, China, and Guatemala accounted for 13%, 5%, and 4%, respectively.

Led by China, Asia dominates the shelled demand, amounting to 16,948 MT (38% of the total), followed closely by Europe with 13,543 MT (30%). China is the top in-shell importer, with 77% of the global share.

Consumption per capita: Calculated using population data provided by the United Nations, Department of Economic and Social Affairs, Population Division.

Estimated consumption per capita: Derived based on the percentage of the population estimated to consume the specified product.

The per capita consumption and estimated per capita consumption for the World Total represent the average across all consuming countries.

PECANS

PRODUCTION

World pecan production has grown from 259,832 metric tons on an in-shell basis (122,984 MT kernel basis) in 2014/15 to 323,491 MT (161,746 MT kernel basis) in 2023/24.

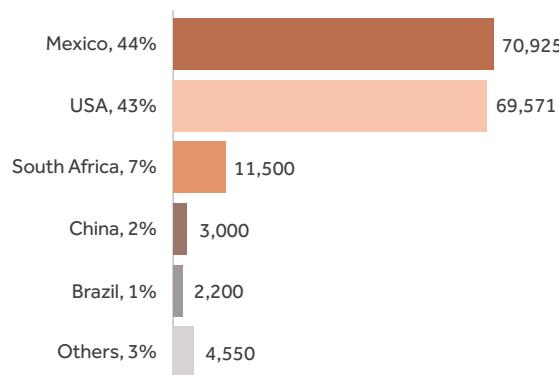

Mexico and the USA dominate global production, contributing 44% and 43% in 2023/24, respectively. Over the past five years, Mexico has led with an average of 47% of global output, followed by the USA at 41%,

highlighting the North American dominance in pecan cultivation.

South Africa emerges as a notable secondary producer, contributing 7% (11,500 MT) in 2023/24 and averaging a similar share over five years. Other contributors, include China and Brazil, each accounting for 2% or less of total production.

EXPORTS

World pecan exports over the past decade have fluctuated between 87,991 metric tons (kernel equivalent) in 2014 and a peak of 134,373 MT in 2019, amounting to 104,921 MT in 2023.

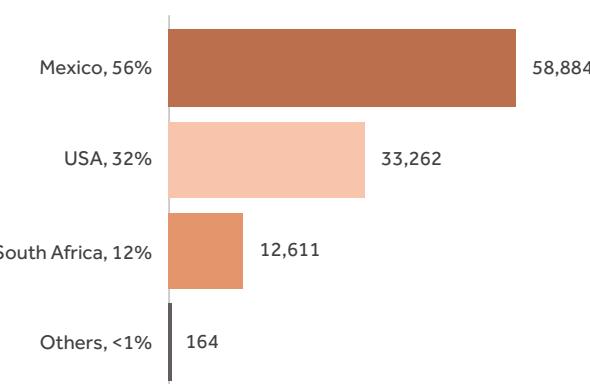

The export market is dominated by Mexico, which accounted for 56% of global exports in 2023 and maintained a five-year average of 54%. The USA follows as the second-largest exporter, contributing 32% in 2023 and averaging 34% over the past five

years. South Africa has increased its role, contributing 12% in 2023 and averaging 9% over the same period.

China dominates in-shell pecan imports with 64% of the market, followed by the USA, a processing hub, which also accounts for 64% of imports, primarily sourced from Mexico. The USA leads the shelled market as well, importing 47,338 MT in 2023 and representing 72% of global imports, with Europe accounting for the following 10%.

PINE NUTS

PRODUCTION

INC NUTS & DRIED FRUITS STATISTICAL YEARBOOK 2024

Since most marketable pine nuts are sourced from natural forests and pine trees typically yield a bumper crop every 3-5 years, annual production fluctuates significantly. Production peaked in 2021/22 at 166,080 metric tons on an in-shell basis (49,080 MT kernel basis), while it amounted to 78,180 MT in 2023/24. Estimations for 2024/25 add up to 117,190 MT and 30,441 MT in-shell and kernel basis, respectively.

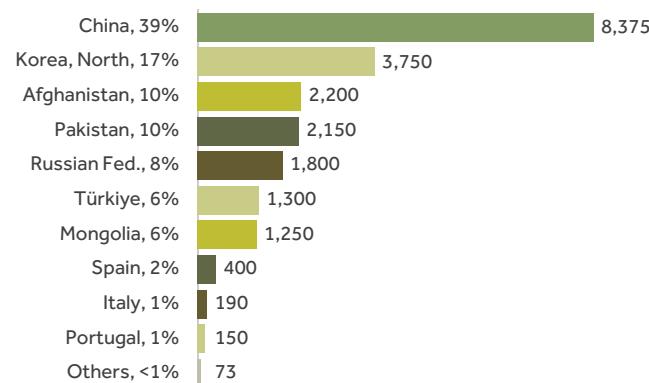

China dominates both global and Asian production, maintaining a five-year average of 27% (9,358 MT) and contributing 39% (8,375 MT) in 2023/24. Other key producers include the Russian Federation (19%), North Korea (16%), and Mongolia (14%). Afghanistan and Pakistan also play important roles, contributing 10% and 8%, respectively. Türkiye, Italy, Spain, and Portugal are the main producers of Mediterranean pine nut (*Pinus pinea*).

WORLD PINE NUT EXPORTS

(Metric Tons, January-December)

EXPORTS

World pine nut exports have experienced fluctuations over the past decade, peaking at 43,569 metric tons (kernel equivalent) in 2017 and reaching 43,867 MT in 2023. Shelled exports dominate the market.

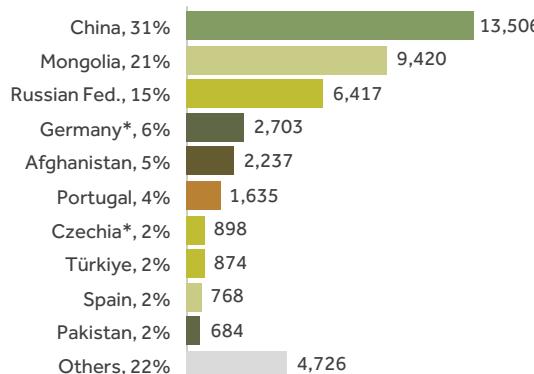

China leads global exports, averaging 36% over five years and contributing 31% in 2023, followed by Mongolia with 21%, primarily exporting in-shell pine nuts to China for processing. Russia ranks third with 15%, while Portugal, Türkiye, and

Spain dominate Mediterranean exports, with significant in-shell pine nut flows from Portugal to processing hubs like Türkiye, Spain, and Italy.

Europe leads global shelled imports with a 45% share, driven primarily by Germany, followed by Asia, led by China, at 33% and the USA at 10%. For in-shell imports, China dominates with a 58% share.

Consumption per capita: Calculated using population data provided by the United Nations, Department of Economic and Social Affairs, Population Division.

Estimated consumption per capita: Derived based on the percentage of the population estimated to consume the specified product.

The per capita consumption and estimated per capita consumption for the World Total represent the average across all consuming countries.

PISTACHIOS

PISTACHIOS PRODUCTION

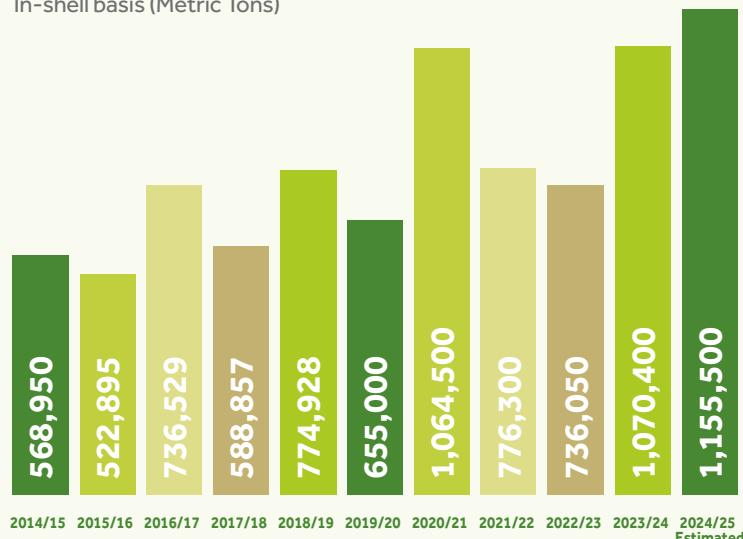

Despite interannual fluctuations caused by pistachios' alternate bearing production cycle, world production has shown significant growth over the past decade, rising from 568,950 metric tons (in-shell basis) in 2014/15 to over one million metric tons in 2023/24, with estimations for 2024/25 at 1.16 M MT.

The USA dominates global production, maintaining a five-year average of 56%

and contributing 63% (677,900 metric tons) in 2023/24. Türkiye and Iran were the next largest producers, accounting for 17% (180,000 MT) and 16% (168,000 MT) of 2023/24 production, respectively. Syria contributes 2%, while Spain, despite currently holding one of the smallest shares, is poised for significant growth in the coming years due to its expanding non-bearing acreage.

EXPORTS

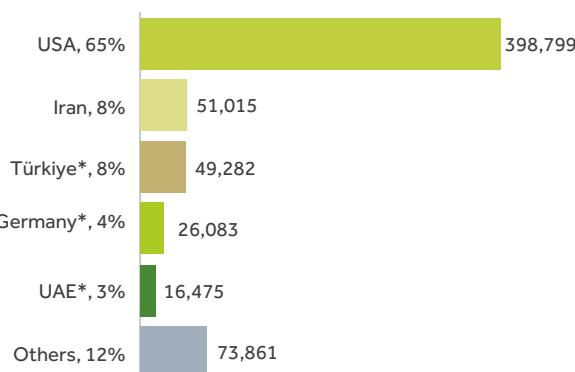

Global pistachio exports have expanded over the past decade, climbing from 514,625 metric tons (in-shell equivalent) in 2014 to a record 615,515 MT in 2023.

The USA leads the market, accounting for 65% of the global share (398,799 MT) in 2023 and averaging 56% over the past five years. Iran is the second-largest exporter with a five-year average of 88,338 MT (18% of the global share), followed by Türkiye with 35,802 MT (7%).

Asia and Europe accounted for the majority of 2023 in-shell imports at 62% and 34%, respectively. China dominates Asian imports with 23% of the share, followed by Türkiye and India. Germany led European imports with 9%. As for the shelled market, Europe accounts for 50% of global imports, with Italy (17%) and Germany (16%) leading demand.

Consumption per capita: Calculated using population data provided by the United Nations, Department of Economic and Social Affairs, Population Division.

Estimated consumption per capita: Derived based on the percentage of the population estimated to consume the specified product.

The per capita consumption and estimated per capita consumption for the World Total represent the average across all consuming countries.

WALNUTS

PRODUCTION

World walnut production has shown a steady upward trend over the past decade, growing from 1.54 million metric tons on an in-shell basis (634,577 MT kernel basis) in 2014/15 to 2.67 M MT in 2023/24, with estimations for 2024/25 also at 2.67 M MT.

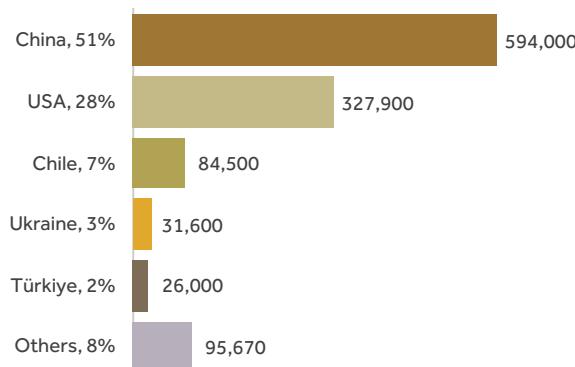

China dominates global production, contributing 51% (594,000 MT, kernel basis) in 2023/24 and maintaining a five-

year average of 50% of total output. The USA is the second-largest producer, accounting for 28% (327,900 MT) in 2023/24. Chile ranks third with 7% (84,500 MT).

WORLD WALNUT EXPORTS
(Metric Tons, January-December)

EXPORTS

World walnut exports have increased significantly over the past decade, growing from 299,261 metric tons (kernel equivalent) in 2014 to 601,184 MT in 2023. Both shelled and in-shell walnut exports have shown consistent growth, with shelled exports increasing steadily year-on-year and in-shell exports contributing a larger share in recent years.

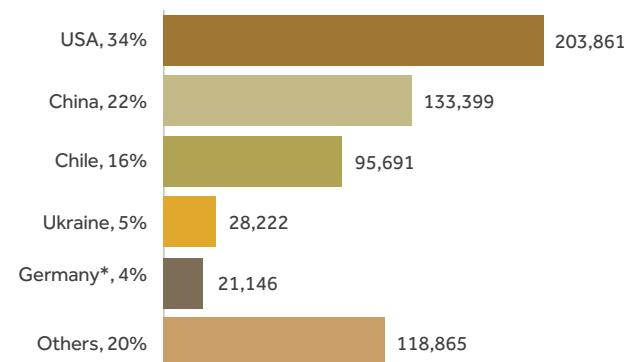

The USA leads global walnut exports, accounting for 34% (203,861 MT) in 2023

and averaging 39% over the last five years. China is the second-largest exporter, contributing 22% (133,399 MT) in 2023, followed by Chile with 16% (95,691 MT).

Europe dominated shelled walnut imports with 53% of the global share in 2023, led by Germany (11%), while Asia followed with 38%, driven by Japan and Türkiye. For in-shell walnuts, Asia led with 68% of imports, with Türkiye, the UAE, and India as key players.

Consumption per capita: Calculated using population data provided by the United Nations, Department of Economic and Social Affairs, Population Division.

Estimated consumption per capita: Derived based on the percentage of the population estimated to consume the specified product.

The per capita consumption and estimated per capita consumption for the World Total represent the average across all consuming countries.

PEANUTS PRODUCTION

PEANUTS

PRODUCTION

Global peanut production has remained relatively stable over the past decade, with an output of 47.73 million metric tons for 2023/24 and an estimated output of 52.48 M MT (in-shell basis) for 2024/25.

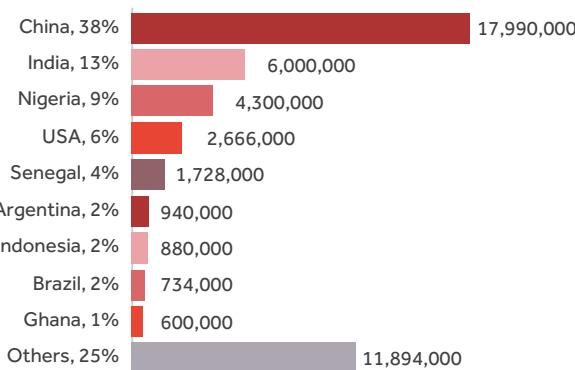

MT), while Nigeria ranks third at 9% (4.3 M MT). The USA contributes 6% (2.67 M MT). Other producers such as Senegal, Argentina, Indonesia, Brazil, and Ghana collectively add to global supply, contributing between 1% and 4% each.

China is the dominant producer, averaging 36% over the past five years and contributing 38% (17.99 M MT) in 2023/24. India follows with 13% (6 M

EXPORTS

Global peanut exports have experienced consistent expansion, reaching 3.50 million metric tons in 2023 (kernel equivalent), up from 1.74 M MT in 2014. Shelled peanuts dominate the trade, representing the bulk of shipments.

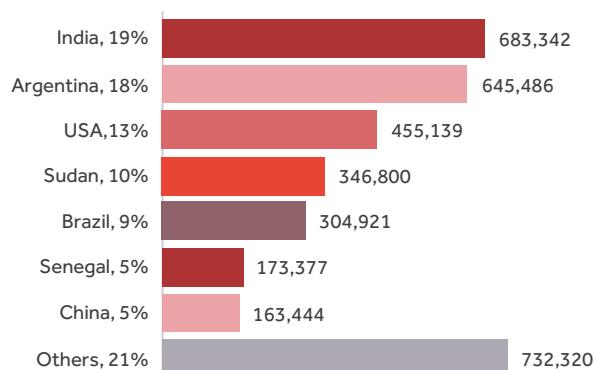

India led with 19% (683,342 MT) of global exports in 2023, closely followed by Argentina at 18% (645,486 MT). The USA ranked third with 13% (455,139 MT), while Sudan (10%) and Brazil (9%) also

contributed significantly. Senegal and China added 5% each.

Asia and Europe are the top markets for shelled peanuts. In 2023, Asia led with 46% of global imports, driven largely by China, which accounts for 17% (545,029 MT). Europe followed with 35% of the share, with the Netherlands as the largest importer in the region.

Consumption per capita: Calculated using population data provided by the United Nations, Department of Economic and Social Affairs, Population Division.

Estimated consumption per capita: Derived based on the percentage of the population estimated to consume the specified product.

The per capita consumption and estimated per capita consumption for the World Total represent the average across all consuming countries.

Estimations might be accounting for peanut products, such as oil, paste or meal.

DATES DATES

PRODUCTION

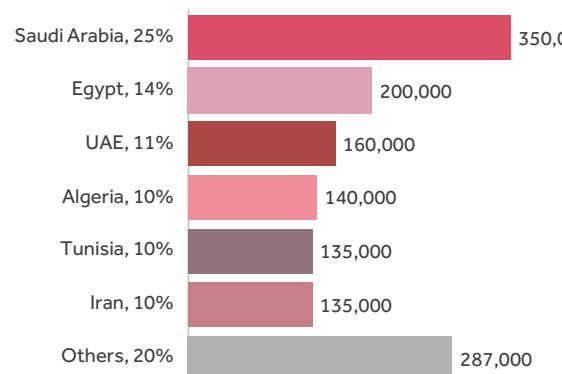

Global table date production has grown significantly, rising from 961,000 metric tons in 2014/15 to an estimated 1.41 M MT in 2023/24, representing an increment of 46%; with estimations for 2024/25 at 1.28 M MT.

Saudi Arabia leads production, contributing 25% (350,000 MT) in 2023/24, followed by Egypt at 14% (200,000 MT) and the UAE at 11%

(160,000 MT). Algeria and Tunisia each account for 10% (140,000 MT and 135,000 MT, respectively). Over the past five years, Saudi Arabia has maintained the lead, averaging 21% of global production.

EXPORTS

Global date exports have shown gradual growth, rising from 1.13 million metric tons in 2014 to a peak of 1.93 M MT in 2021, before dipping to 1.71 M MT in 2023.

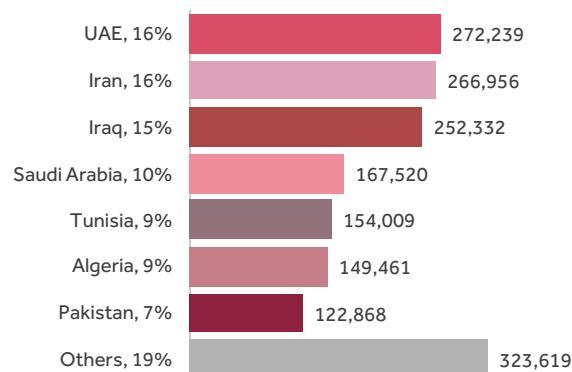

The UAE and Iran were the top exporters in 2023, each accounting for 16% (272,239 MT and 266,956 MT, respectively), followed by Iraq at 15% (252,332 MT). Saudi Arabia and Tunisia contribute 10% and 9%, respectively, alongside Algeria (9%) and Pakistan (7%). Over the past

five years, the UAE has consistently led exports, averaging 16%.

Asia dominated global date imports in 2023, accounting for 63% of the total, led by India (29%) and the UAE (11%). Africa follows with 17%, driven by Morocco (8%), while Europe accounts for 16%, with France, Germany, and the UK contributing shares of 3%, 2%, and 2%, respectively.

The per capita consumption and estimated per capita consumption for the World Total represent the average across all consuming countries.

DRIED APRICOTS

PRODUCTION

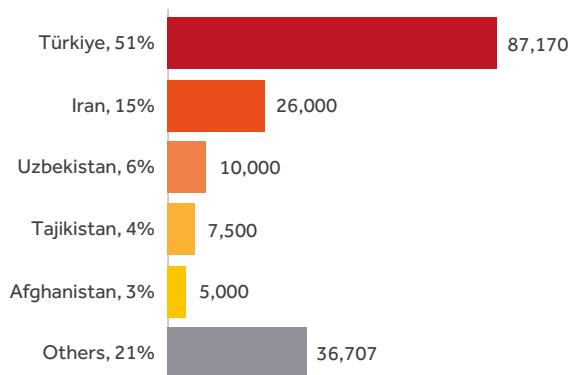

Global dried apricot production varied over the last decade. Production increased from 118,129 metric tons in 2014/15 to a peak of 226,760 MT in 2017/18, and amounting to 172,377 in 2023/24; with estimations for 2024/25 at 193,617MT.

Türkiye is the dominant world producer, accounting for an average of 53% over the past five years and 51% of the

2023/24 production (87,170 MT). Iran ranks second with 15% (26,000 MT), followed by Uzbekistan (6%), Tajikistan (4%), and Afghanistan (3%).

DRIED APRICOTS

WORLD DRIED APRICOT EXPORTS
(Metric Tons, January-December)

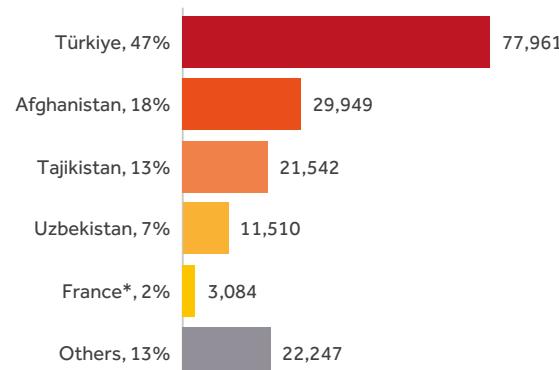

Over the last decade, global dried apricot export volumes have remained relatively stable, ranging from 133,444 metric tons in 2016 to a peak of 166,294 metric tons in 2023.

Türkiye is the dominant exporter, contributing an average of 58% over the past five years (85,663 MT) and 47% of exports in 2023 (77,961 MT). Afghanistan ranks second with 18% in 2023, followed by Tajikistan (13%) and Uzbekistan (7%).

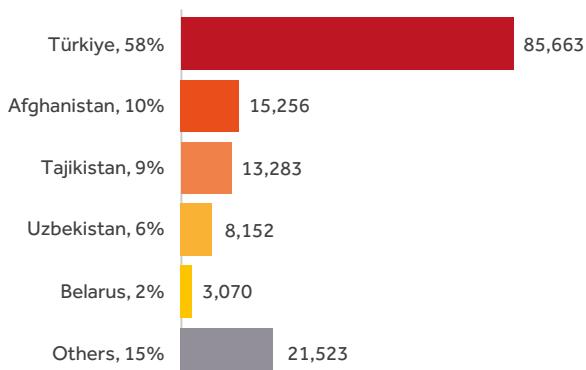

In 2023, Asia accounted for 45% of dried apricot imports with Kazakhstan being the largest importer at 14%. Pakistan followed with 9%, and China accounted for 8%. Europe was the second-largest market with 36%, driven by Germany (6%), France (5%), and the UK (4%). The USA alone accounted for 9% of global exports.

Consumption per capita: Calculated using population data provided by the United Nations, Department of Economic and Social Affairs, Population Division.

Estimated consumption per capita: Derived based on the percentage of the population estimated to consume the specified product.

The per capita consumption and estimated per capita consumption for the World Total represent the average across all consuming countries.

CANBERRIES

DRIED CRANBERRIES

PRODUCTION

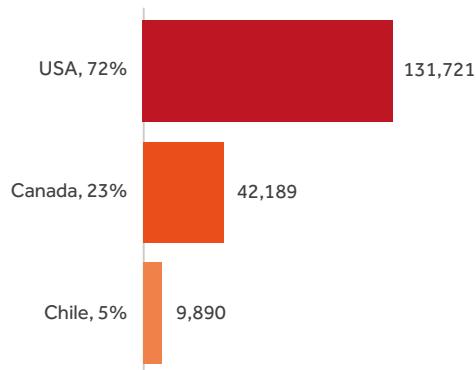

Between 2014/15 and 2024/25, global production of sweetened dried cranberries has fluctuated, with a peak of 214,314 metric tons in 2018/19. After a decline to 167,493 MT in 2021/22, production rebounded to 183,800 MT in 2023/24, with an increase to an estimated 202,551 MT in 2024/25.

The USA is the dominant producer, contributing 72% of the total in 2023/24 (131,721 MT) and maintaining an average of 74% over the past five years (139,594 MT). Canada ranks second with 23% (42,189 MT in 2023/24), followed by Chile with 5% (9,890 MT).

EXPORTS

DRIED CRANBERRIES

Global dried cranberry exports showed consistent growth over the last decade, from 101,488 metric tons in 2014 to 174,806 MT in 2023.

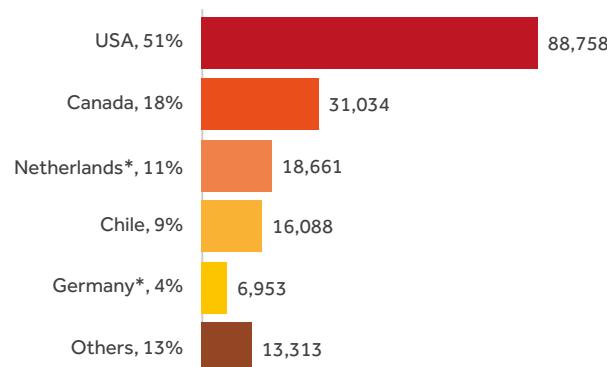

The Netherlands and Germany, as re-exporter countries, contribute with 11% and 4%, respectively.

The USA is the leading exporter, accounting for 51% of the total share in 2023 (88,758 MT) and maintaining a five-year average of 51%. Canada ranks second with 18% (31,034 MT in 2023), followed by Chile (9%).

In 2023, Europe was the largest importer of dried cranberries, accounting for 51% of global imports, with the Netherlands (14%) and Germany (12%) being the top importers. Asia followed with 21% of imports, dominated by China at 12%. Canada, as a processing hub, contributed 11%.

Consumption per capita: Calculated using population data provided by the United Nations, Department of Economic and Social Affairs, Population Division.

Estimated consumption per capita: Derived based on the percentage of the population estimated to consume the specified product.

The per capita consumption and estimated per capita consumption for the World Total represent the average across all consuming countries.

DRIED FIGS

DRIED FIGS PRODUCTION

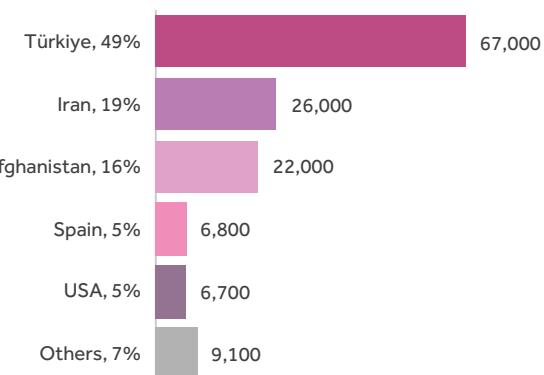

Over the past decade, world fig production has fluctuated interannually, peaking at 155,700 metric tons in 2019/20 before declining to 137,600 MT in 2023/24, with a decrease to an estimated 133,500 MT in 2024/25.

Türkiye dominates dried fig production, contributing 49% of the 2023/24 total (67,000 MT) and maintaining a five-

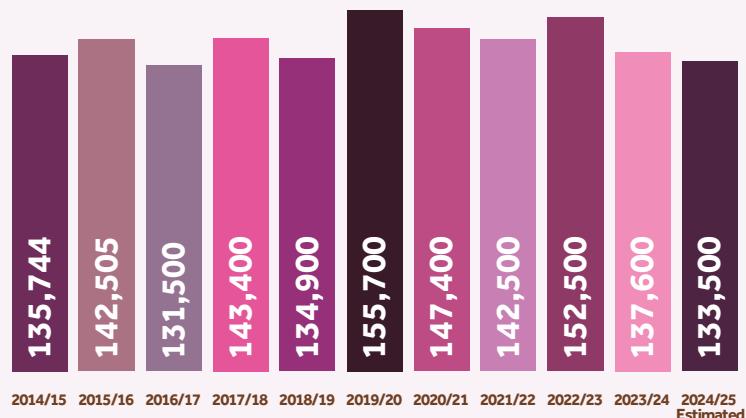

year average of 55% (80,300 MT). Iran ranks second with 19% (26,000 MT) in 2023/24 and an 18% five-year average, followed by Afghanistan with 16% in 2023/24 (22,000 MT). Spain and the USA contribute smaller shares, each around 5-6%.

EXPORTS

WORLD FIG EXPORTS

(Metric Tons, HS code 080420, January-December)

Between 2014 and 2023, global fig exports showed steady growth, rising from 130,273 metric tons in 2014 to 195,880 MT in 2023, with a peak of 206,321 MT in 2022.

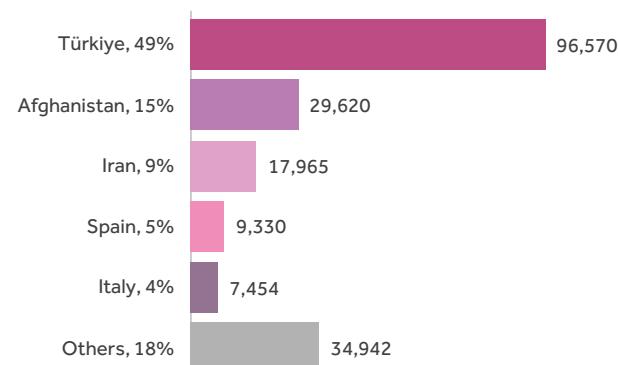

(29,620 MT in 2023), followed by Iran at 9% and Spain at 5%.

Türkiye leads the global market, accounting for 49% of exports in 2023 (96,570 MT) and maintaining a five-year average of 51% (93,618 MT). Afghanistan ranks second with 15%

In 2023, Europe was the largest importer of dried figs, accounting for 49% of the total, with Germany contributing 10%. Asia followed with 35%, driven by India (14%) and China (11%). The USA accounted for 10%.

Consumption per capita: Calculated using population data provided by the United Nations, Department of Economic and Social Affairs, Population Division.

Estimated consumption per capita: Derived based on the percentage of the population estimated to consume the specified product.

The per capita consumption and estimated per capita consumption for the World Total represent the average across all consuming countries.

DRIED GRAPES PRODUCTION

Over the last ten years, world production of dried grapes (Raisins, Sultanas and Currants) has shown fluctuations, peaking at 1.42 million metric tons in 2020/21 before declining to an estimated 1.22 M MT in 2023/24, with an increase to an estimated 1.31 MT in 2024/25.

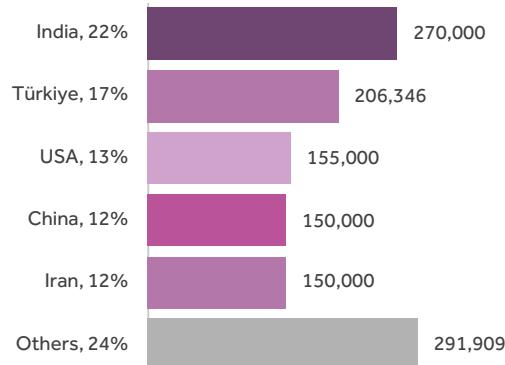

In 2023/24, India emerged as top producer, contributing with a bumper crop of 270,000 MT (22%), followed by

Türkiye with 206,346 MT (17%). However, with over 90% of India's crop consumed domestically, Türkiye continues to hold its position as the leading international supplier. Over the past five years, Türkiye has led the global market, producing an average of 21% of the total (278,469 MT).

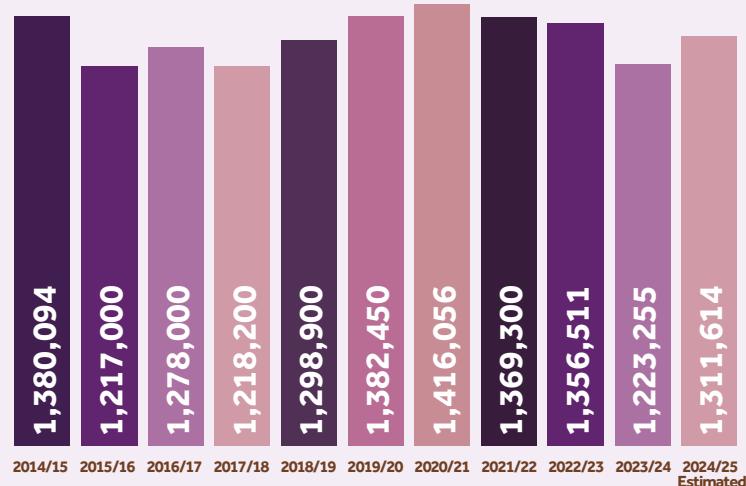

The USA produced 155,000 MT (11%), while China and Iran each accounted for 150,000 MT.

DRIED GRAPE EXPORTS

DRIED GRAPES

Between 2014 and 2023, exports of dried grapes (Raisins, Sultanas and Currants) fluctuated starting at 709,948 metric tons in 2014, peaking at 888,148 MT in 2022, and amounting to 817,446 MT in 2023.

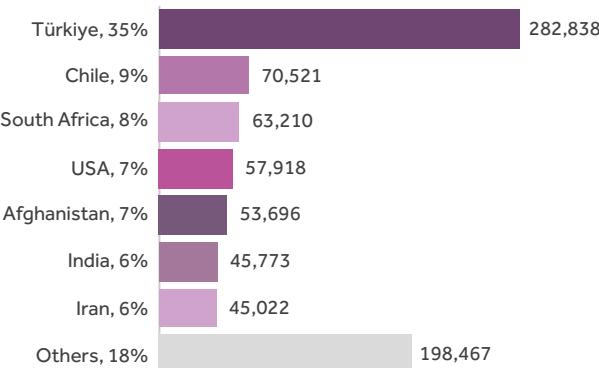

(7%). India, despite its high production, only accounted for 6% of exports due to significant domestic consumption.

Türkiye remains the dominant global exporter, contributing 35% of exports in 2023 (282,838 MT) and maintaining a five-year average of 32% (271,054 MT). Other key exporters include Chile (9%), South Africa (8%), the USA (7%), and Afghanistan

Europe led dried grape imports in 2023 with 410,232 MT (50% of global imports), with the UK (10%), Germany (8%), and the Netherlands (7%) being the top contributors. Asia ranked second, accounting for 228,278 MT (28%), with India, Türkiye, and Japan importing around 4%, 3%, and 3% respectively.

PRUNES

PRODUCTION

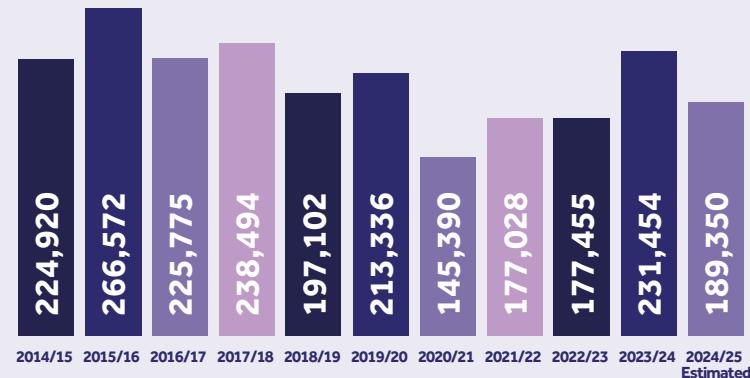

World prune production has fluctuated over the years, peaking at 266,572 metric tons in 2015/16 and amounting to 231,454 MT in 2023/24, with an estimation of 189,350 MT for 2024/25.

Over a five-year average (2019/20–2023/24), the USA consistently dominated with 37% of production, while Chile accounted for 31%, France 16%, and Argentina 10%.

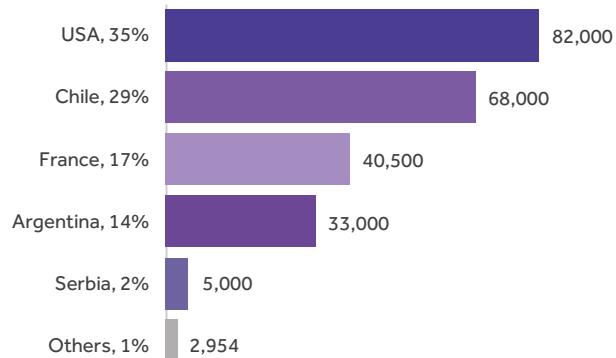

For the 2023/24 season, the USA led production with 82,000 MT (35%), followed by Chile with 68,000 MT (29%), France at 40,500 MT (17%), and Argentina with 33,000 MT (14%).

EXPORTS

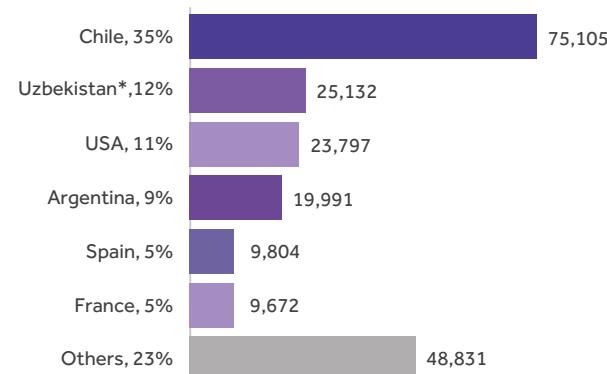

World prune exports have remained relatively stable from 2014 to 2023, peaking at 213,009 metric tons in 2017 and reaching 212,332 MT in 2023.

Chile dominates prune exports, contributing 35% (75,105 MT) in 2023 and averaging 32% over five years (2019–2023). In recent years, Uzbekistan has emerged as a significant prune exporter, primarily targeting the Chinese market, contributing 12% (25,132 MT) of global

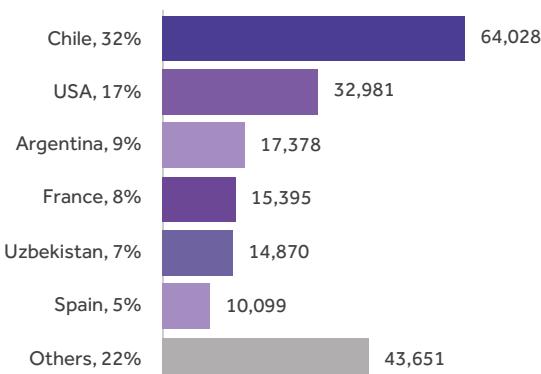

exports in 2023. The USA (11%) and Argentina (9%) followed.

In 2023, Europe accounted for 42% of global imports, led by Germany with 5%. Asia followed with 32%, with China dominating the region's imports at 19%.

Consumption per capita: Calculated using population data provided by the United Nations, Department of Economic and Social Affairs, Population Division.

Estimated consumption per capita: Derived based on the percentage of the population estimated to consume the specified product.

The per capita consumption and estimated per capita consumption for the World Total represent the average across all consuming countries.
